

Abstract

A warning device including a status and function indicator circuit for indicating the status and function of the warning device. In a visual warning device such as a
5 strobe light, the status and function indicator circuit includes a status output device such as an LED. The LED and associated circuitry are configured to indicate both proper operation of the visual warning device and, in the event of a device failure, will indicate whether the fault lies with circuitry for the visual warning device or simply with a warning output device.
